

Lower Fuel Costs with E15

E15 is a gasoline blend that contains more than 10% and up to 15% ethanol.

It saves consumers money, burns cleaner than regular fuel, drives farm income, and can be used in 96% of all light-duty vehicles on the road today.

• E15 Availability in the U.S.

As a result of the temporary waivers issued in 2022, 2023, 2024, and 2025 many consumers choosing E15 experienced average cost savings between 10 and 30 cents per gallon during the summer driving season, with some locations offering over \$1 off per gallon when compared to E10.

Making E15 available year-round — and making it the standard fuel nationwide — could:

- **SAVE** more than **\$20 BILLION** in annual fuel costs.
- **PUT \$36.3 BILLION** in additional income into American households.
- **SUPPORT 188,000** new U.S. jobs.
- **GENERATE \$66.3 BILLION** in U.S. GDP.
- **INCREASE** corn demand by about **2.3 BILLION BUSHELS** per year.
